Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 5-9, drawn to a double barrel member, classified in class 403, subclass 49.
- II. Claims 10-14, drawn to a scaffold, classified in class 182, subclass 178.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a means for attaching a vertical scaffold member positioned near the interior end of the upper tube. The subcombination has separate utility such as an expandable railing.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
